Be advised that the Jackson County Environmental Health Department is allowing the installation of an on-site septic system utilizing a pump and/or an ATU. Please have your licensed septic contractor or licensed electrician as applicable verify that all regulations pertaining to a pump and/or ATU system and its ancillary equipment as stated in the *Manual for On-Site Sewage Management Systems (Sect. E)* are met. These requirements include that the alarm switch must be placed on a circuit separate from the pump switch and all wiring and components of the whole system shall confirm to Electrical Code.

This form is to be completed when final electrical connection is made.

Be advised that the above referenced property has an on-site sewage management systems installed which requires the diversion of surface water and/or gutter down spouts away from the tank and drainfield to prevent possible premature system failure. This form is to be signed when final grading is complete.

The landscaper has been notified of the location of the on-site sewage management system. All necessary site work and grading has been completed to divert surface water away from and to prevent surface water from ponding on any portion of the system as of this date. I understand that all work must meet EPD regulations.
